StoryCast: Research and Planning

By Darlene · October 17, 2026

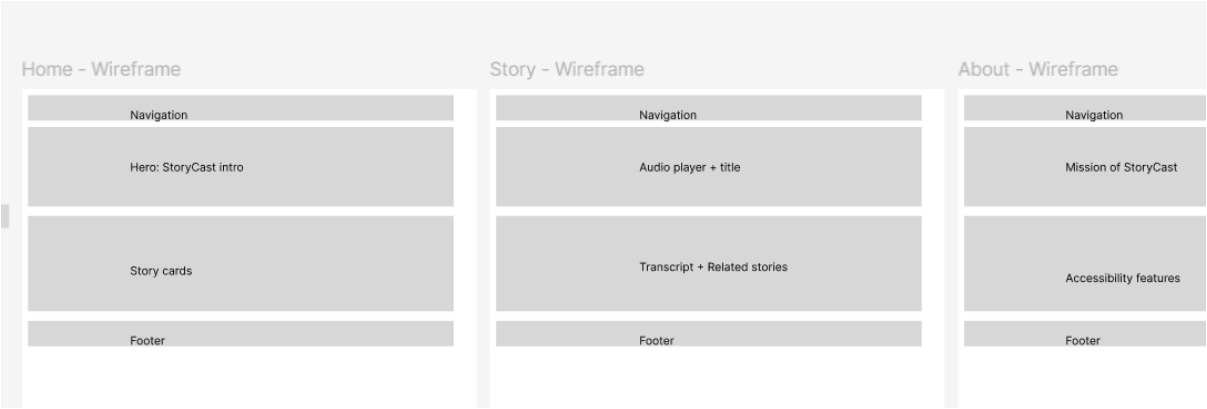

Information architecture

Every page uses one h1 for the page title, h2 for the main sections (Featured stories, Transcript, Related stories, Our mission), and h3 for individual items. Each page uses the semantic landmarks header, nav, main and footer.

StoryCast has three pages: Home, Story and About. Every page links to the others through the main navigation, so a visitor can reach any page in one click.

Wireframes

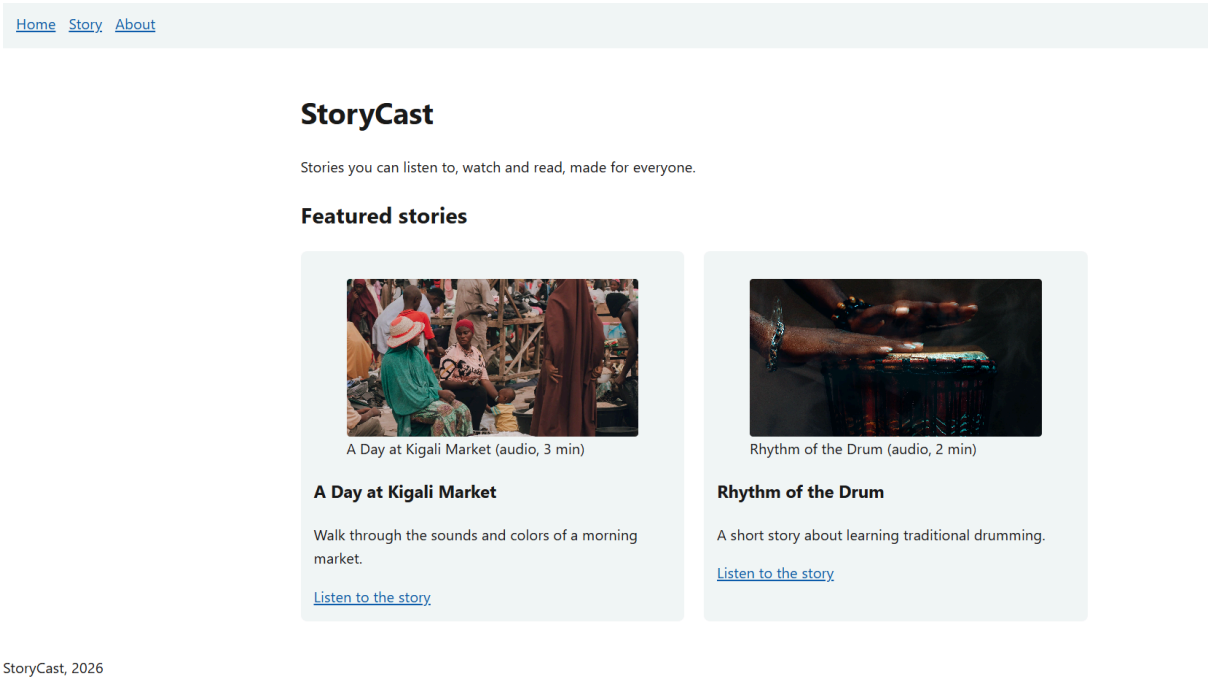

Each page has a navigation bar, main content and a footer. Home has an introduction and featured story cards. Story has an audio player, a transcript and related stories. About explains the mission and the accessibility features.

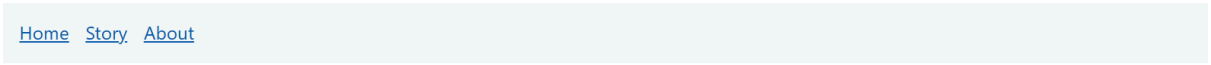

Mockups

The mockups use the final colours and fonts from the Sass tokens, with real story images, an audio player, a transcript and a related-stories list.

Home page

Story page

A Day at Kigali Market

Audio story, about 3 minutes. A transcript is below.

Transcript

[Soft ambient music begins, slow and calm.]

[Gentle tones rise and fall for about three minutes.]

[The music fades out slowly.]

Related stories

- Rhythm of the Drum

About page

About StoryCast

Our mission

StoryCast shares audio and video stories that everyone can enjoy, whatever their abilities.

Accessibility features

- Transcripts for every audio story
- Captions for video
- Full keyboard navigation with visible focus
- High-contrast colors that meet WCAG AA
- Semantic structure for screen readers

How to engage

Listen on the Story page, read the transcript, and explore related stories from the Home page.
